

European Style Picknick-Pump

... chrome plated brass with tap and KEG coupler (flat fitting)

Whether used on the private garden party or as refilling equipment for the Rocket Packs beverage container applicable. Pre-chill the Beer KEG from industrie, connect the Picknick-Pump and you'll receive fresh draft beer.

If want to operate as refilling equipment for the Rocket Pack container, need to purchase additionally the Filling Hose (Item No. RP1108)!

Filling procedure as described with Kit Filling Hose for Beer!

Instead of Flash Chiller you connect the Picknick-Pump on the Keg from brewery and the other components of filling house (see left image above).

Dont forget, the empty Rocket Pack container need to receive a pre-pressure of approx. 1 bar (operate the manual air pump approx. 20 times) and start then with filling process!!!

You need to operate the Picknick-Pump consequently while refilling process – the handle hast o be open while this procedure.

The Snifter valve will spit clear beverage when Rocket Pack container is full filled. Note, if it spits foam, allow the transfer process to continue until the foam is purged!!!!
